Title: "Suppressed Cycle Based Carrier Modulation Using Amplitude Modulation"

Serial No. 09/916,054

Attorney Docket No. P012676-01UT

Responsive to Office Action Mailed July 19, 2004

Date: December 29, 2004

REMARKS

In his Final Office Action the Examiner has rejected Claims 1-8 under 35 U.S.C. 103(a)

as being unpatentable over Kolanek. (U.S. Pat. No. 6,147,553) in view of Hunsinger et al (U.S.

Pat. No. 5,465,396) and Cowie et al (U.S. Pat. No. 6,717,992). The Examiner has stated that

Claims 9-17 are allowable.

As stated above Applicant disagreed with the Examiner and by telephone conference

requested Examiner reconsider his position given the fact that the Cowie patent is not relevant

prior art. During the conference the Examiner suggested changes clarifying the rejected claims

to make all the claims allowable which Applicant has done in the amended claims. In the

amendment Applicant has also added dependent Claims 18-21 to better describe that an integer

number of said wavelets can have their amplitude suppressed to any amount including all the

way to substantially zero energy level. No new matter was added to the application.

Amended Claims 1-21 now appear in the application. Reconsideration of the application

and the patentable merits of the subject matter covered by these claims is respectfully requested.

Applicant submits that Claims 1-21 are allowable and respectfully requests early favorable action

by the Examiner.

If the Examiner believes a telephonic interview with Applicant's representative would aid

in the prosecution of this application, he is cordially invited to contact Applicant's representative

at the below listed number.
